

## Strategy to Study

Vividh Bansal

Manager, Central Bank of India

### ABSTRACT

“We can do it together” – To ensure the development of the nation as a whole there is a need for a two-stage process where students are divided according to their intellectual capability through a common test held by the governing bodies sufficient time ahead should be given when they take up courses to further their career, they should be informed and be made aware of the fact where they stand right now and should be briefed about the career opportunities at an early stage with special emphasis on identification of attributes necessary for each stream available for career.

### INTRODUCTION

“Study” is considered to be the elixir that assigns purpose and capability to budding professionals as well it adds to the common sense of a person, thereby allowing the conscience to make quality decisions and perform quality work. In this article, we will try to relate study to strategy and its importance in daily life.

‘Study’ is important in life and for many, apart from making you a person, it also serves as bread and butter. Seeing its relevance, the period it exists in a person's life, and its importance in the progress and growth of an individual, ‘study’ is an important mandatory parameter in the life of a middle-class man seeing the heights he can scale through it. Certain life-changing events especially when we see them in terms of power or influence and money happen through certain examinations in which some are in regular courses and some are through open examinations held yearly or after some time. These examinations serve as a hub of opportunities and employment perspectives for large masses and help them attain the necessary qualifications and be trained for the designated coveted positions in society and industry. So studying in reality is a game-changer if properly taken up. ‘Study’ serves as a platform for golden opportunities. Hence, the need to take it up in a proper systematic manner is in essence very much

required as its ambit is vast and guided limited study is required to attain the necessary upliftment of ability level above a threshold to emerge as successful and avail these open positions.

‘Study’ is in a nutshell, a divine blessing available in the hands of today’s generation to take up assignments and to get involved in a life-changing experience. With the kind of research and facilities available today a lot of inventions with meaningful usage in the life of humankind are taking place very fast and with the addition of innovation with small significant changes happening every here and there it is becoming day by day a lot easier to automate and work productively and efficiently. The manpower required is decreasing day by day for regular repetitive work and productivity too is increasing. With the miniaturization of the devices and the increase in the speed of handheld devices and machines, mammoth-looking tasks have become easy to do and execute regularly. Study occupies a major part in all of these.

‘Communication’ has emerged as one of the decisive factors in today’s lifestyle. Right from a phone call to recorded lectures to various events held with a purpose, communication holds keynote importance in them right from preparation, execution, and its effect.

'Study' has allowed communication to spread and to be available to everyone irrespective of location, differences, and social conditions. Poverty is now a misnomer, as the deep annals of knowledge stand exposed by the two things namely study and communication acting in tandem with each other. So as a person, group, society, city, country, and considering on a very large level- the world, we are shrinking fast in terms of reach and growth. It has been possible due to the twin effects of 'Study' and 'Communication' which are day by day taking huge strides in the development of the human race.

'Space and time' are the fantasy associated with today's world. Although it is a much-researched subject nowadays and although too much exists in theory little has been made possible practically. 'Recorded' and the concept of memory exists in today's world which has made many things practically possible but still our consciousness doesn't have permission to travel in time in any way either backward or in the forward direction. There are many avenues where nature takes precedence especially when it comes to life. We are still not decisive about the impact and consequences of imitating nature thereby disrupting the fine delicate balance between life and nature. Spatial presence to date remains as controlled by nature. Although particle physics has been able to discover many nano-particles but still the effect of it on spatial dimensions remains to be discovered. 'Time' is considered to be the always-moving fourth dimension and to date on records no one has been able to go back in time with flesh and bones.

Hindu Mythology has referred to life on Earth as the world of death (Mrityu-Lok) and quite rightly so, one who is on Earth has to die and leave for the other world. Death is mysteriously an undesirable event that is still undeciphered and taken differently by different religions. Although quite lengthy procedures have been written, most of them in detail confirm the presence of Gods and a higher celestial space where he lives and admit only those who have fared well by the wheel of karma. So almost only a meager amount of the world we live in has been deciphered and much still needs to be looked upon and is present but is still under a dark side invisible to any living entity. We have to agree in principle that the body and soul are two very different entities and the body thrives just like a machine and needs biological fuel with biological residue being thrown out each day. 'Life' is still amazing and also at the same time very complex and difficult to understand about its very presence. 'Study' gives you a meaningful way to pass life with reassurance and resoluteness and to also gain

a proper place in the societal framework by being able and mature with proper education and needful skills to operate in this framework. So, 'Study' allows differentiation between two persons by equipping them with skills and expertise to end up in life with a career allowing them to earn as well as to give back to society something valuable which helps not only others both in terms of money and career.

So, 'Study' is now thriving on 'Communication', 'Technology', 'Space', and 'Time' as we have briefly discussed the present stature of all of them and their importance in the interrelationship with each other. As with time, they all are growing so is the enormity as well as the stature of the 'Study', and strategy is changing day by day. All four are growing simultaneously and with the linkage between each of them so immaculate so is the inter-winding and dependence on each of them for each other's growth. With the continuous intricate development of all four through better research avenues we now have too much knowledge spread over and literature is increasing day by day. The fields of 'Study' are getting broader and broader with more and more branches with intense depth of research and scrutiny and also with it the fact that it is being distributed among a handful of chosen talent taken through a stiff process the whole scenario is looked upon as win-win, with sparkling talent taking strides overstrides. Strategy to get into those deserving students to propel into the fantasy of today's research world it is necessary to ace others through guided efficient study.

It will look very gruesome if we try to narrate the importance of strategy and also the one which will help to get anyone success as nothing goes straight and failure by a small point is to a failure. So is it only intelligence or intellect that helps you sail through the time of examination would be wrong to say.

First of all, there exists a sharp difference between study, examination, and success. We study every day, sometimes for a long period or in a short period, or sometimes in a small chunk of time. Each of the patterns of study helps us in our work style and also helps us earn.

The study is done all day from the moment you see someone and give a response to him to the big examinations which require at least 1 year and to emerge successful it may take 2-3 years more. We are in a continuous mode of learning as per the situations presented to us and decide to confront this situation, we require knowledge of our whereabouts and that comes through 'study'. Now this situation can be sudden or scheduled and the time offered to attain it

may be a choice and, in most cases, when it is an examination, it is a chosen one. 'Study' goes on and on and with it the preparations and concentration to attain the necessary knowledge base to be upbeat in the presented situations.

'Communication and time' decide fate with the level of the intelligentsia and intellect present with preparation and guidance to a person and how he fares in the presented situation in front of him. So, if we study minutely, we will see that there is a mindset associated with success in a designated situation which can be achieved by proper training and

preparation conditioned to the situation usually an examination, event, or task. The 'Study' reveals the parameters on which the required situation stands and with subtle directed guidance allows to achieve favorable results in the same. 'Study' changes its stature and orientation as per the designated situation a person wishes or is forced to face. It can take the form of 'physical education' or it can also be of any 'visual stimuli to attain the designated goal or mark to qualify or to be very specific, to attain the required designated parameter by attaining suitable level of success.

### Types of Study:

Sr. No.	Types of Study	Duration (Time)	Frequency Level	Intelligentsia Level	Tested Parameter	Requirement level	Success-Failure ratio
1.	Written (Entrance Examination)	1-4 hours	Yearly	High	Mental Ability	Very High	Very High
2.	Verbal (Interview)	0-2 hours	Very Small Interviews	Low to Very High	Presence	Moderate	Moderate
3.	Physical (Fitness Level)	1-3 Days	At breaks	Moderate	Fitness Level (Body)	Moderate	Moderate
4.	Examination	1-6 hours (single paper)	Multiple at a time (Once in a year)	High	Mental Ability	Moderate to High	Moderate to High
5.	Task (To Attain a goal, timed)	Allotted Time (As per task (hours to days))	Not Repetitive	Moderate to Low	Skill Set	Moderate	Moderate to High
6.	Reading and Learning (Schooling)	Years	Daily	Not Specified	Developmental Stage	Not Specified	Not measured
7.	Delivery of Services	Daily	Repetitive	As per the job level	Earning Stage	Moderate	Measured as per organization policy
8.	Creation	No Time Limit	Unique	Not Limited to a specific level	Not a designated parameter	Not specified	Extremely High
9.	Innovation	No Time Limit	Unique Add-On	Not Limited to a specific level	Not specified	Extremely High	Extremely High
10.	Leadership	No Time Limit	Unique Add-On	Not Limited to a specific level	To drive and to lead qualities	Extremely High	Extremely High
11.	Daily Routine	Daily	Daily	All Included	Life and Daily Chorus	All Included	Almost same

Now strategy remains to be discussed, one which will incite success and thereby usher the highest level of motivation - self-actualization. It could be realized quite easily that the mindset develops and rises quite remarkably- from novice to expert – it develops to be in sync with the presented situation. But to attain such a state it is necessary to be ready with your strategy by having a proper mindset attained after a conditioned preparation over some time. A conditioned mindset is attained by properly practicing under directed guidance to achieve results as per designated parameters that have been identified by the group of experts.

### Written Examination:

Type of Written Examination	Time Duration	Subject Concerned	Frequency Level	Tested Parameter	Intelligentsia Required	Success Failure Ratio
Engineering	0-8 hours	Science	Yearly or Half-Yearly	Intellect	Very High	Very High
Medical	0-8 hours	Science	Yearly or Half-Yearly	Intellect	Very High	Very High
CA	0-8 hours	Commerce	Yearly	Intellect	Very High	Very High
NDA/Army Exams	0-6 hours	General Ability	Yearly	Intellect	Moderate	Moderate
Civil Services	1-15 Days	General Ability	Yearly	Intellect and Decision-making	Moderate	Moderate
Management	0-5 Hours	General Ability	Yearly or Half Yearly	Intellect and Decision-making	Moderate	Very High
Internal Examinations	0-8 Hours	Course Specific	Quite Frequent	As per the course matter	Moderate	Very High

With so many options available and not going into a detailed discussion of every specific course, we can see each career option requires dedicated directed guidance and certain basic requirements to be full-filled as per the norms and most of them are the entrance to a long-distinguished career. Most of them have requirements of an intellect level that supersedes the rest of the parameters and allows the person to enter into it through designated coveted respected entrance examinations. Still, entrance examinations are in themselves not sufficient to guarantee equal growth and success to the persons entering the course. Financial condition, motivation levels, background, determination, scores, and support are too necessary to pursue the courses and then attain the required levels of maturity to pursue a profession. There are long queues and lakhs of applicants sitting for these coveted degrees and jobs in which only a handful are successful. Many people quit these programs in between due to a lack of concentrated concentration and pursue something else but quite correctly studying at a typical Indian University is just like living like a monk. Still, as you gain intellectual freedom and professional expertise you start earning too – the most successful adage that goes with these degrees is that the best student in most cases who graduates from these colleges is just like a monk, and at the end of the course he wears badges of honor and makes the going quite correct, “Monk who sold his Ferrari”.

The epitome of his success is due to the career a student undertakes. His preparation may not be adequate at the entrance level but at several points in his career, he will get the desired opportunities to prove his mettle in some way or the other. He gains name, fame, and money on his way through the course.

‘Study’ and ‘Personality’ go hand in hand, what your mindset is, largely relates to what you pursue as a career but your in-built structure and thinking pattern are what make you a student. Sitting idle, the whole day long, with the textbook in front wouldn’t make you successful. “Learning” is very deeply connected with your lifestyle as well as your mindset with the way you have been directed to focused preparation as well as haphazard research in your life term. It is ‘sad’ that in most Indian universities this pre-examination enthusiasm ends with entry into the course and most of the students wither due to a lack of directed guidance and are forced to be mediocre with opportunities dying in front of them. Your grades fall, and your professors are unresponsive. After some time, you realize this but it is too late and you end up goofing up your career.

So, speaking of our country in particular, apart from the students we also have a dearth of quality teaching and we should realize that most of the Indian intellectuals who are at higher posts were either extremely talented or had support from foreign institutions and foreign intellectuals and professors.

So to keep the learning environment healthy it is a necessary responsibility of all the responsible intellectuals operating in a trade to emphasize 'quality learning' through the maintenance of standards and ethics of their profession. To ensure that students are in the mode to learn and revive and also that they are not wasting their quality time to attain a goal far from their capability a designated career counseling with detailed emphasis on development and harmony as a whole nation as well as the mankind should be ensured.

"We can do it together" – To ensure the development of the nation as a whole there is a need for a two-stage process where students are divided according to their intellectual capability through a common test held by the governing bodies sufficient time ahead should be given when they take up courses to further their career, they should be informed and be made aware of the fact where they stand right now and should be briefed about the career opportunities at an early stage with special emphasis on identification of attributes necessary for each stream available for career. After the examination choice of streams with the assessment made of a student should be submitted to the main unified governing body and he should be repetitively counseled by the respective stalwarts of their field at least a year before he decides to take the subject in which he will pursue his career. Attempts should be not the criteria but be based on the attempts taken to qualify for the entrance examination for scholarships, rewards, and recognition to further their studies in the desired field. So a common test at a stage after which a student can realize his potential fully and is aware of his strengths and weaknesses and where he can succeed.

Money, crony capitalism, and cartelization have added to the woes of the Indian education system. They are the evils that have introduced a lot of holes in the path of a student to attain his coveted degree. Education in India now has lost dedication, intellectuals, glory, name, and fame with the achievements of its predecessors and the respect they have commanded to the bunch of few people who have introduced reservation, an increase of strength or intake of students with the increase of fees and also the duplicity of premier institutions as well as granting same stature to the private colleges as the

hard-earned admission to premier colleges. It is rightly said, "Money is a necessary social evil" and expertise and unmatched reverence for the institutional bodies have led to the slippage of Indian Universities at the world level despite having renowned faculty and brilliant alumni and students spread all over the world. Last but not least each of us has his own life and story to tell at the end of the day although would differ in many respects from each other something in it will always let you realize the sameness in yours.

*Not I but we make a society, a nation, and on a larger scale a world, and wherever we are it is our duty to give back to the nation what we have earned and faithfully serve our assigned duties and take up those that come in our way. In the end, I have just to say, let us celebrate the oneness and the stature of what we are today and start looking at the coming future with a determined outlook to be prepared and ready to make it better.*
